SOGx6 EVB StarterKit-QSG

Part Number	902-SOG36-Vx0RH / 902-SOG46-Vx0RH
Platform Form	MediaTek MT8366 / MT8367
Product Name	SOGx6 EVB StarterKit
Description	SOG36/36P Evaluation Kit based on MediaTek Genio 360/360P
Revision	V1.2
Issue Date	2026.07.02

Approved by	Reviewed by	Issued by
TP Wu	Calvin Lin Angela Chen	Lion Wang

Revision History

Version	Date	Description
0.1	2026/05/06	draft
1	2026/05/15	Initial release (First Edition)
1.1	2026/5/20	Fixed photo error in Figure 1. Added detailed description for USB Type-C connector and Split Key function.
1.2	2026/07/02	Camera module info revised. Updated document naming convention.

TABLE OF CONTENT

SOGx6 EVB StarterKit Overview

The SOGx6 EVB StarterKit is engineered for embedded applications that require reliable, low-power implementation of edge AI and GenAI applications. Built around the advanced 6nm MediaTek Genio SoC family, the kit is available in two configurations: **SOG36 (powered by the MT8366 / Genio 360), and SOG36P (powered by the MT8367 / Genio 360P)**. The platform integrates an 8th generation MediaTek NPU that delivers up to 7.4 TOPS of acceleration for handling complex AI tasks like object detection, image classification, and speech recognition, as well as on-device support for GenAI applications and leading LLMs (Large Language Models). This enables real-time, low-latency AI inference on the edge, reducing reliance on cloud-based processing.

The SOGx6 platform also features an advanced hexa-core CPU configuration consisting of a single Cortex-A76 Big-CPU and 5-core Cortex-A55, paired with an Arm Mali-G57 MC2 GPU. It supports up to dual displays, or a single display up to 4K60, making it a strong fit for smart retail, smart home, transportation/smart cities, healthcare, entertainment, education, industrial, and enterprise applications.

The SOGx6 StarterKit relies on an OSM (Open Standard Module) reference design and is pin-to-pin and software compatible across the MT8366, and MT8367 models, allowing for seamless migration depending on your computing and budget requirements. With comprehensive support for Android, IoT Yocto, and Ubuntu, it provides a stable foundation for long-lifecycle IoT deployments.

SOGx6 EVB StarterKit Requirements

This EVB StarterKit supports a wide range of hardware configurations and Android software environments. For simplicity, this Quick Start Guide will demonstrate a specific setup using the following conditions:

- EVB: SOGx6 EVB
- SoM: OSM36 / 36P
- Boot Mode: eMMC Boot
- Display Mode : DP
- Operating System: Android 16
- Host PC: Windows 10 / Ubuntu 22.04

Additional Items Needed for Quick Start Guide Demo

To support the demo, the following additional items are needed.

- USB Type-C to USB Type-A adapter
- USB keyboard
- USB mouse
- DisplayPort (DP) monitor
- DisplayPort (DP) cable

Setup Host PC Environment

Install a terminal emulator on your Linux or Windows PC. This guide uses Tera Term 5.4.0 on Windows 10 as an example. For detailed settings, please refer to the "Connect to the Serial Console“ section.

SOGx6 EVB StarterKit Hardware Overview

SOGx6 EVB Packing List

No.	Part Number	Item Name	Description	Quantity
1	902-SOG36-Vx0RH / 902-SOG46-Vx0RH	SOG36 / 36P EVK Main Board	ASSY BOARD SOG36 / SOG36P EVK Main Board	1
2	314-SSBE8-US0A8	12V DC JACK Power Adapter	AC ADAPTER 12V/5A + AC POWER CORD C13 US (T152)	1
3	306-SOG52-000XX	IPEX wire	COAXIAL CABLE SMA TO IPEX4 OD1.32*L200mm	1
4	087-SSBE6-W001G/ 087-UT180-A00EP	Antenna Cable set	SMA ANTENNA cable set	2
5	309-SOG52-000ER	Debug cable	USB A to C CABLE L=1M (**Debug cable not for charging, only for data transfer**)	2
6	007-SSBE8-W00A6	AW-XB468NF	WiFi 6 module-PCIe AW-XB468NF (7921)	1
7	203-M2044-021MD	Screw	Screw for assemble AW-XB468NF	1
8	413-SOG36-000XX	User Manual	User Manual with data sheet download	1

Peripherals Picture

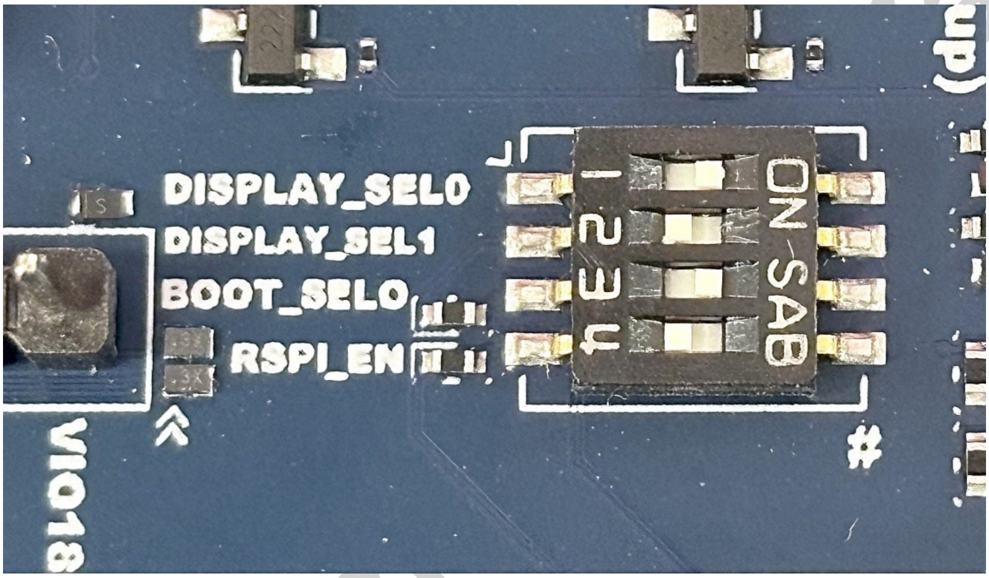
SOGx6 EVB StarterKit Installation and Configuration

Boot Mode Select & Display Mode Select DIP Configuration

The Boot Mode Select and Display Mode Select functions are controlled by the DIP switch (L7).

Boot Mode:

The SOG36/SOG36P EVK defaults to eMMC. For NOR , set the **BOOT_SEL0** to **OFF**.



Boot function DIP Configuration

Function	Description	
Location	**L7 (SW1801)**	
Function	**OFF (High level)**	**ON (Low level)**
BOOT_SEL0	NOR Boot	eMMC Boot

Note: NOR boot is supported only for Yocto OS.

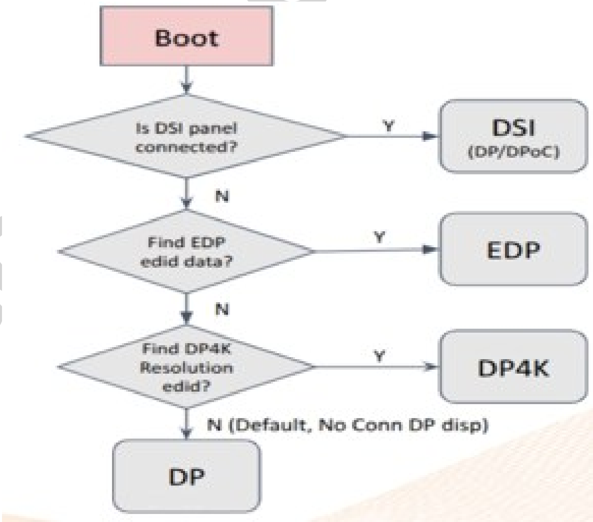
Display Mode:

The SOG36/SOG36P EVK uses DP as the default display output mode. Other supported modes are USB-C (DP Alt Mode) and eDP.

Function	Description	
Location	L7 (SW1801)	
Display Mode	**DISPLAY_SEL1**	**DISPLAY_SEL0**
eDP connector	ON (0)	ON (0)
USB-C (DP Alt Mode)	ON (0)	OFF (1)
DP connector (Default)	**OFF (1)**	**ON (0)**
NULL (Hi-Z termination)	OFF (1)	OFF (1)

SOGx6 Display Scenario

Priority	Detection Condition	Primary Display	Secondary Display Support	Remark
1	**DSI panel connected**	**DSI**	**DP / DPoC supported**	**-**
2	**eDP EDID data found**	**eDP**	**-**	**-**
3	**DP 4K EDID data found**	**DP 4K**	**-**	**-**
4 (Default)	**No valid high-res display detected**	**DP**	**-**	**-**



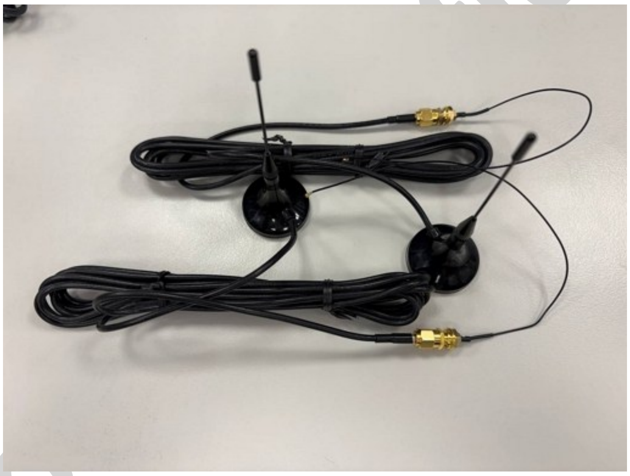
※ Critical Note – Power-On Sequence

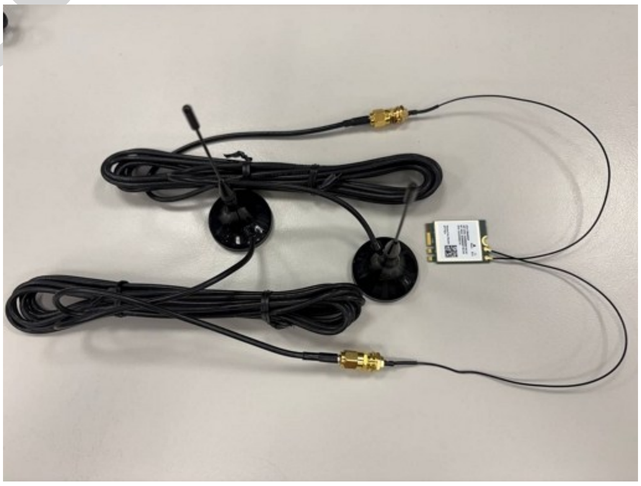
Since the system automatically boots as soon as power is applied, please make sure the **Display Mode** is correctly set and the appropriate display is connected **before** powering on the EVK.

For all other jumper configurations and functions(Raspi function / WiFi PCM etc.), refer to the SOGx6-SOM-Carrier Board Hardware User Guide.

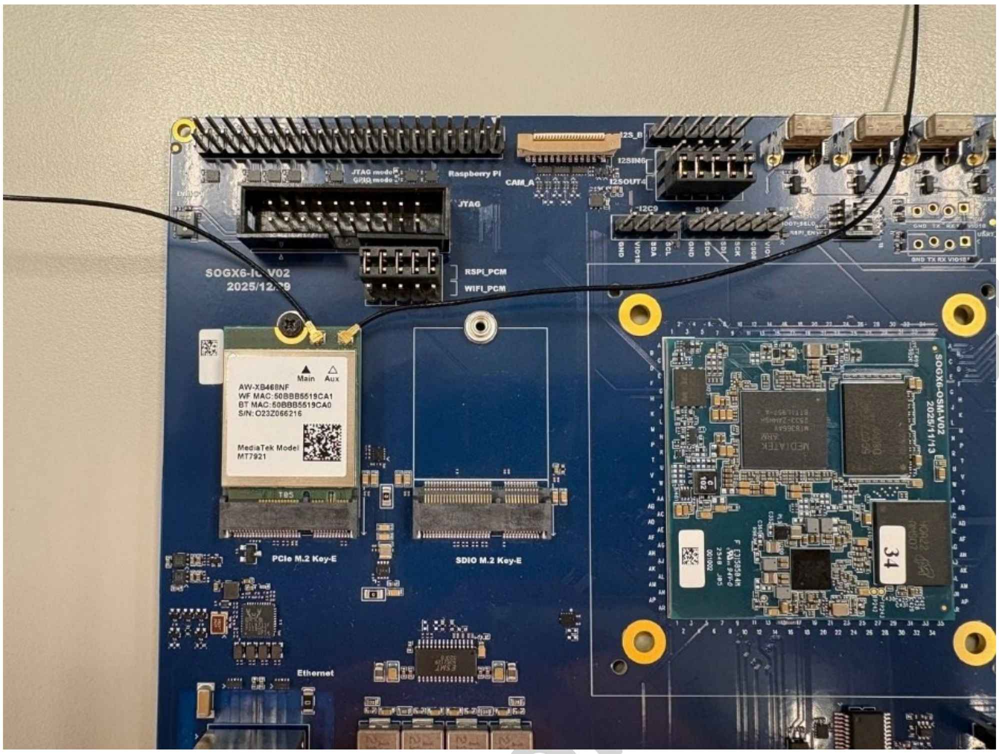
WiFi Module Installation

Insert the Wi-Fi module into the PCIe M.2 Key-E slot(L19), secure it with the locking screw, and install the Wi-Fi antennas.





Assemble WiFi module with mainboard:



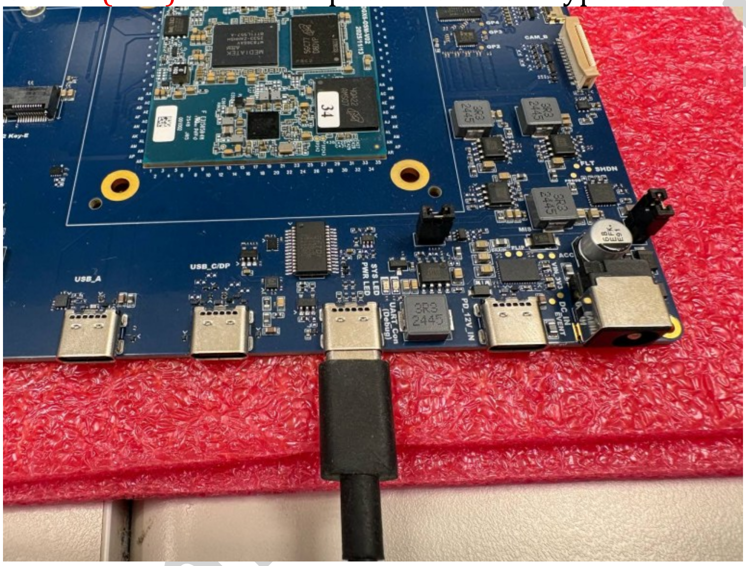
Connect to the Serial Console

Set up the serial port on the host PC to view debug output and interact with the Starter Kit through a command-line interface.

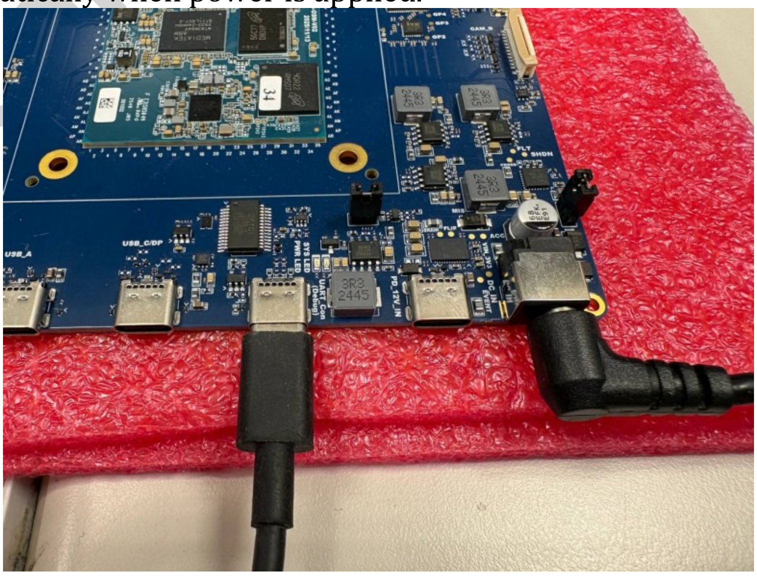
- **Windows:** Tera Term (5.4.0) / Putty
- **Linux:** Minicom / Picocom

Installation procedure for viewing EVK logs

- **Step 1:** Connect UART0(L13) to the computer via a USB Type-C cable.

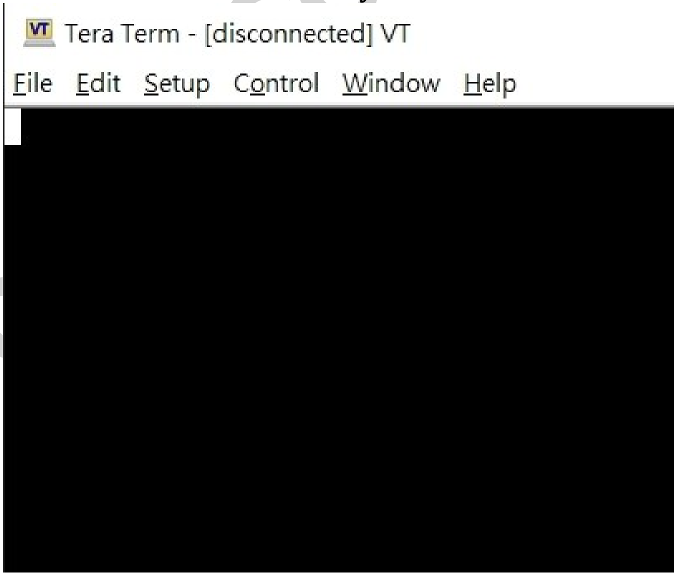


- **Step 2:** Connect the DC jack power adapter, but do not apply power yet. The system will boot automatically when power is applied.

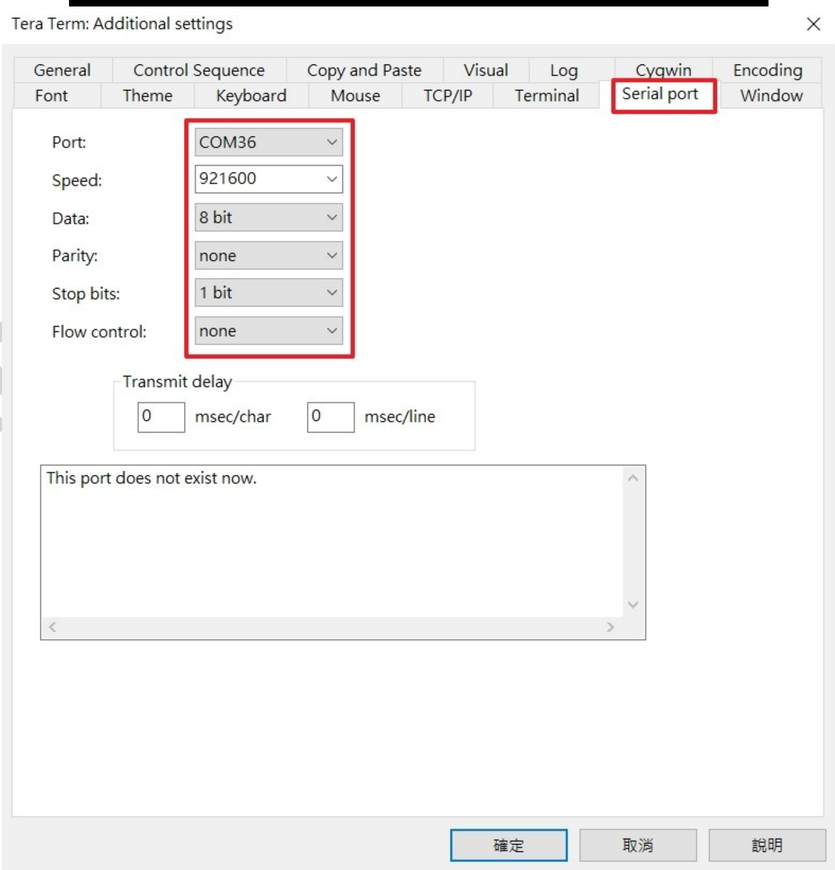


- **Step 3:** Check what Serial port number device that used.

- **Step 4:** Open serial tool such Tera Term, Putty….etc.



- **Step 5:** To configure the UART port settings, specify the following parameters:
  Serial Port Number: Select the appropriate serial port number
  Baud Rate: Set the baud rate to 921600
  Data Bits/Parity/Stop Bits: Configure as 8 data bits, None parity, and 1 stop bit



- **Step 6:** Then connect the monitor to the SOGx6 EVB using a DP cable. Once all connections are complete, apply power to the board. The system will boot automatically. You should see the display output on the monitor and the trace logs printed through UART0 on the host PC.

EVB StarterKit Basic Testing

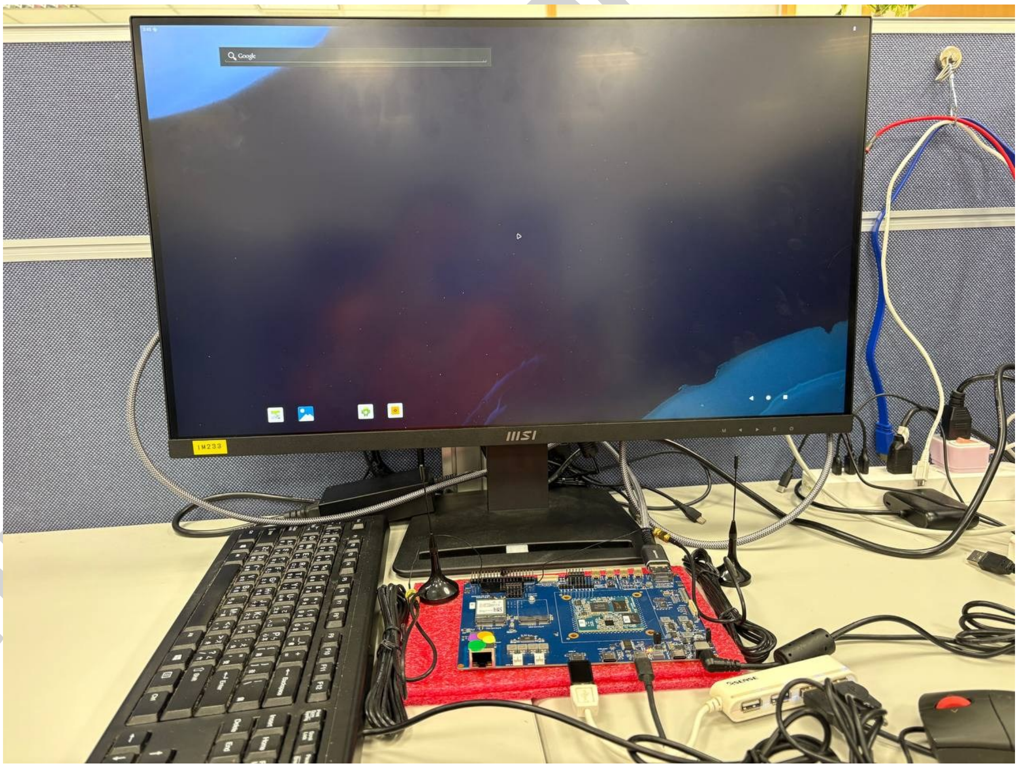
Objective

To verify the flashed image boots up successfully and board's ability to connect to WiFi, access a web browser.

Steps:

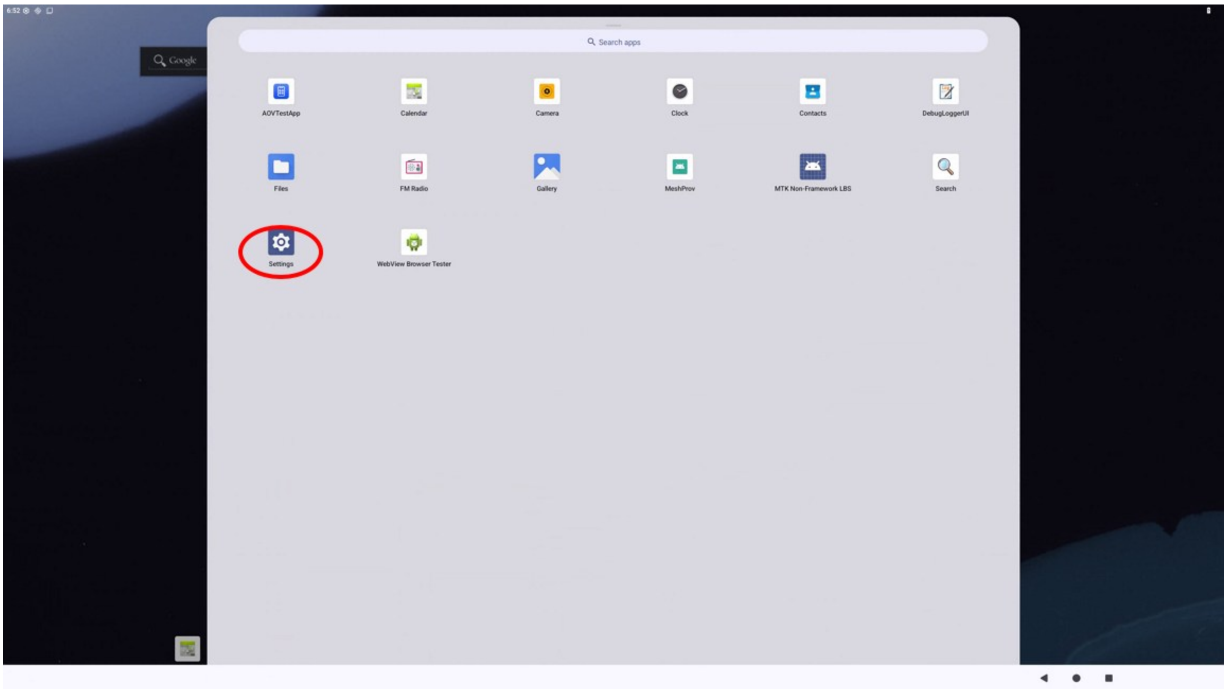
1. **Boot the Board:** Ensure the board is fully powered on and has completed the booting process.

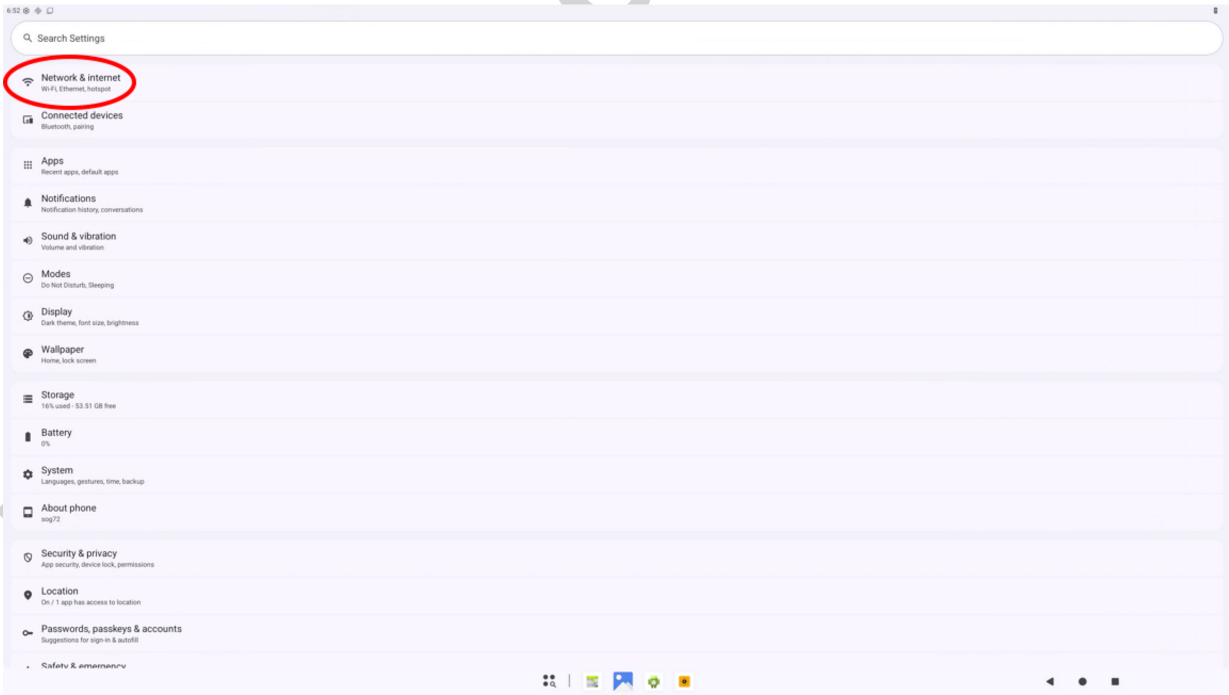
android
MSI



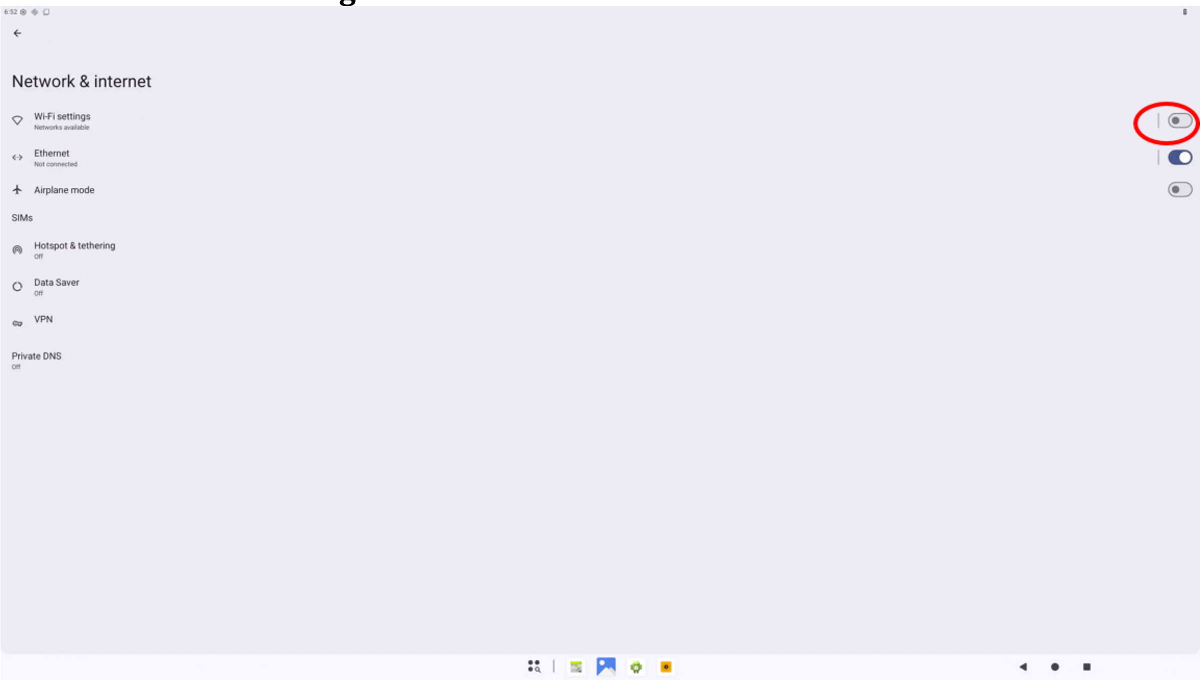
MSI

2. **Connect to WiFi:** Navigate to the 'Settings' menu on the board. - Locate the 'WiFi' option and select it. - Choose the desired WiFi network from the list of available networks. - Enter the necessary credentials (e.g., password) to connect to the WiFi network. - Confirm that the board is successfully connected to the WiFi network.

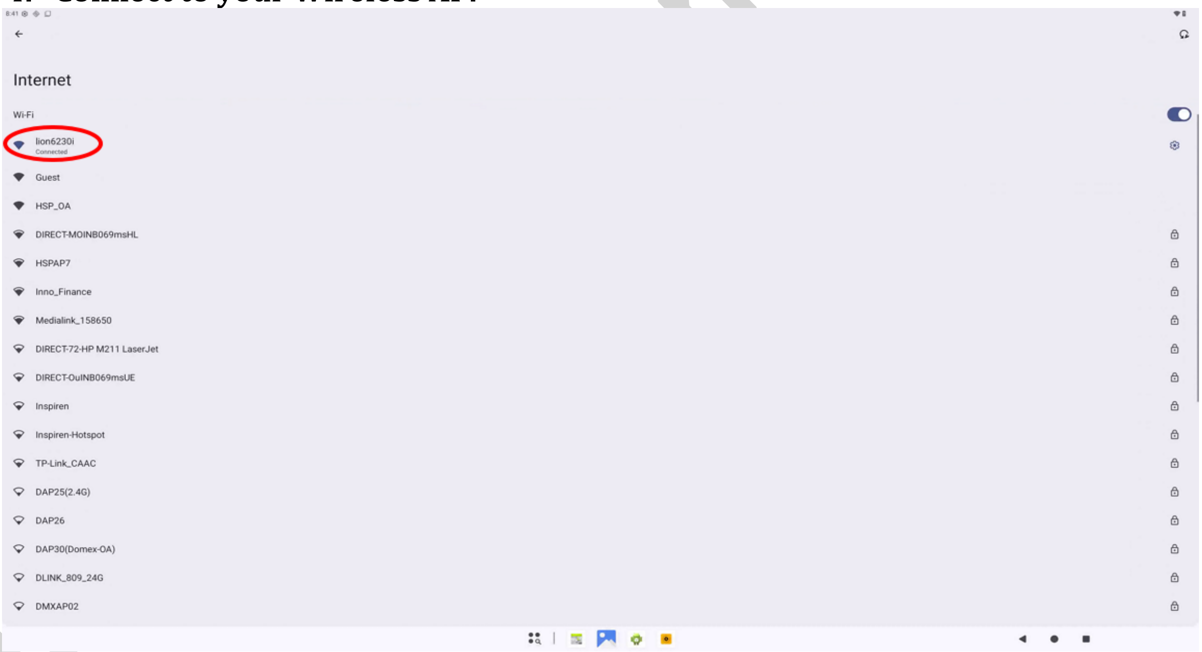




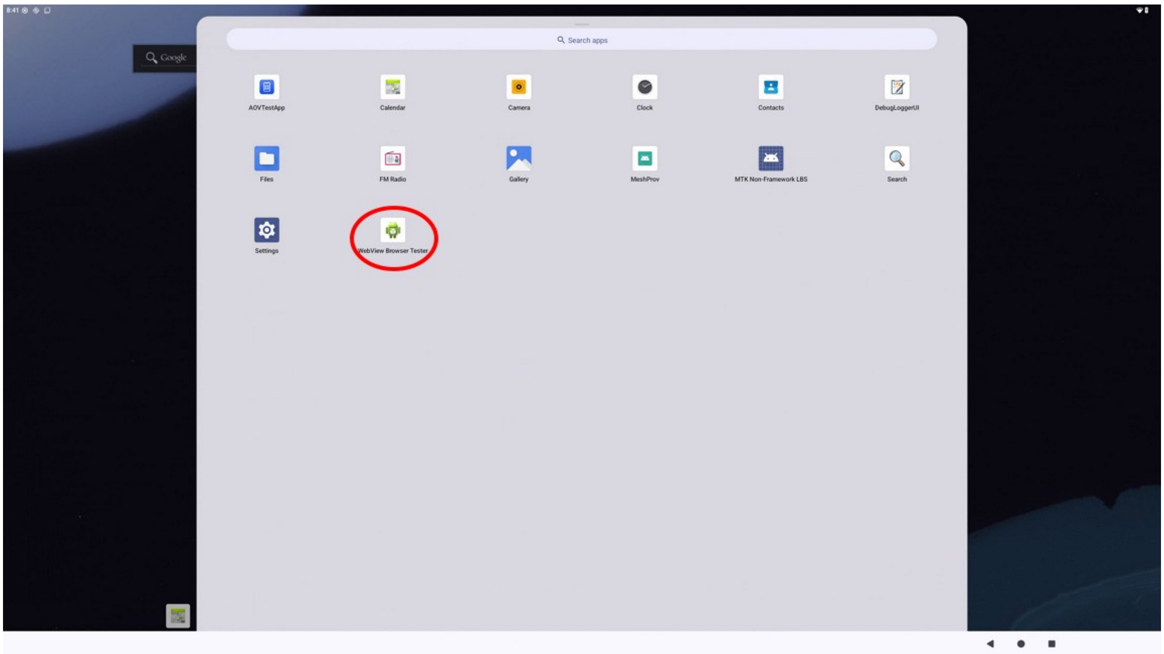
3. **Turn on WiFi settings.**

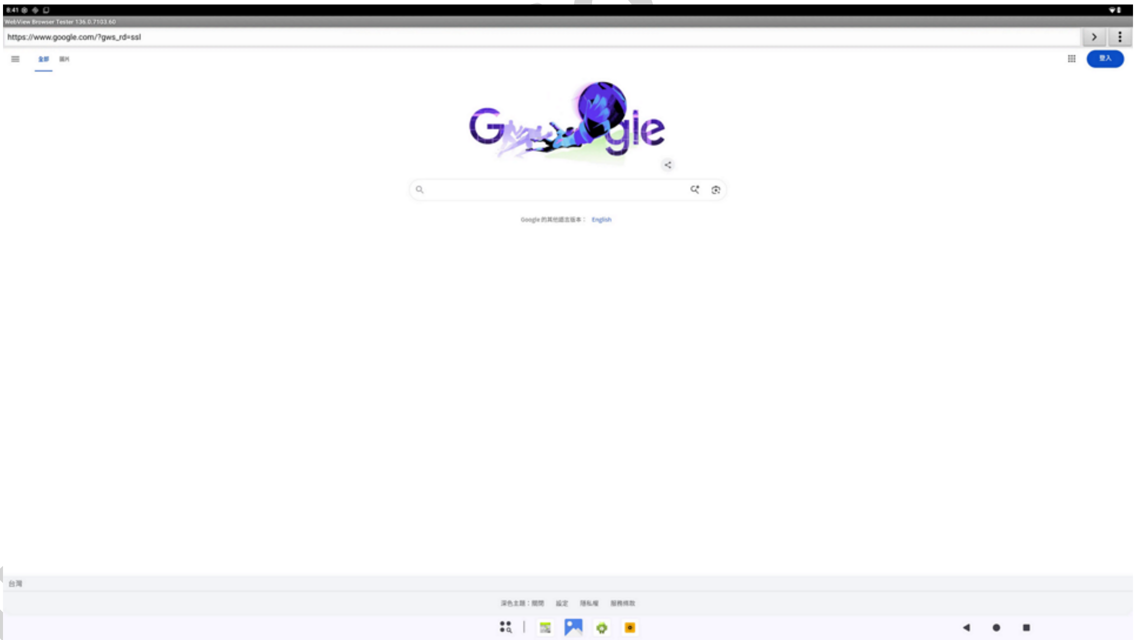


4. **Connect to your Wireless AP.**



5. **Open the Browser:** Launch the web browser application on the board. - In the browser's address bar, type the URL: www.google.com. - Press 'Enter' or select the 'Go' button to navigate to the Google website.





Note
Ensure that the WiFi network is operational and accessible.
